

Personal Income by States and Regions in 1964

Nonagricultural Incomes at Record Dollar Volume in All Regions

CONSUMER incomes rose to a record dollar volume in nearly every State in 1964, under the continuing impetus of the expansionary forces that have operated since early 1961 and the special influence of the income tax reductions.

For the Nation, total personal income amounted to \$491 billion last year, an increase of \$29 billion or 6½ percent over 1963. Per capita personal incomes also reached new highs in 1964. At \$2,566, the all-State average was more than \$100 or 5 percent above the previous year's figure.

These sizable 1964 gains in total and per capita personal income represented mainly increases in real purchasing power since consumer prices advanced approximately 1½ percent over the period.

Among regions, the largest dollar increases in total income were in the Mideast (\$7.3 billion), the Great Lakes (\$6.4 billion), the Southeast (\$5.5 billion), and the Far West (\$4.5 billion). The fact that the largest dollar gains last year were in these four areas reflects chiefly their economic size; together, they account for more than three-fourths of all personal income in the Nation.

In relative terms, the largest gains last year were in the Southeast, the Far West, the Great Lakes, and New England, where individuals' incomes expanded 7 percent. In the Southeast and Far West, the above-average economic expansion appears to have been mainly a continuation of the long-term income uptrend in these regions. In the Great Lakes, the better-than-average increase in 1964 reflected the

continued high rate of motor vehicle production throughout 1964.

The Mideast and Southwest matched the income gain of the Nation as a whole, with the economy of the Southwest benefiting significantly from growth in the aerospace and electronic manufacturing industries.

Only in the agricultural Plains and Rocky Mountain regions did personal income advance at below-average rates. In both, declines in farm income held the 1963-64 rise in aggregate income to 3 percent. Nonfarm income gains in the Plains and Rocky Mountain regions were closer to the national rate, although the indirect impact of the dip in agricultural income was apparent.

Per capita personal income

A significant portion of the State and regional differences in rates of change in aggregate income in a given year stems from differences in domestic migration rates in the various sections of the country. As a result of this migration, State differences in rates of change are generally less for per capita personal income than for total personal income. The 1964 changes conformed to this expected pattern.

In 30 States, the 1963-64 change in per capita income was within 1 percentage point of the average for all States. If the range is widened to 2 percentage points, an additional seven States are included. In a given year, most of the changes that differ substantially from the national rate are attributable to special economic factors, such as a sharp fluctuation in farm income in the agricultural States or a

cyclical downturn or recovery in industrialized areas.

Although rates of change in average incomes tend to be quite uniform from State to State, there are wide differences in income levels. In 1964, per capita incomes ranged from \$1,438 in Mississippi to \$3,460 in Delaware. It should be noted, however, that these dollar figures are not adjusted for regional differences in cost of living, size of family, or other factors that may affect standards of living. Accordingly, differences may be less in real terms than in current dollars.

Extremes in average income appear to show a distinct geographic pattern. Of the nine States (including the District of Columbia) with per capita incomes above \$3,000, all except one—Illinois—are located in the Northeast or Far West. Conversely, of the 11 States with incomes below \$2,000, all except 1—South Dakota—are located in the Southeast.

For the 31 States whose average incomes fall between these two groups, level of income appears to be principally associated with industrial structure. That is, the 13 States with per capita incomes ranging from \$2,450 to \$3,000 are generally the more industrialized States, while those States with incomes ranging from \$2,000 to \$2,450 rely to a large extent on agriculture and/or mining as major components of their economic base. Although some geographic pattern is evident, it is much less clear cut than the pattern shown by the first groups with the highest and lowest average incomes.

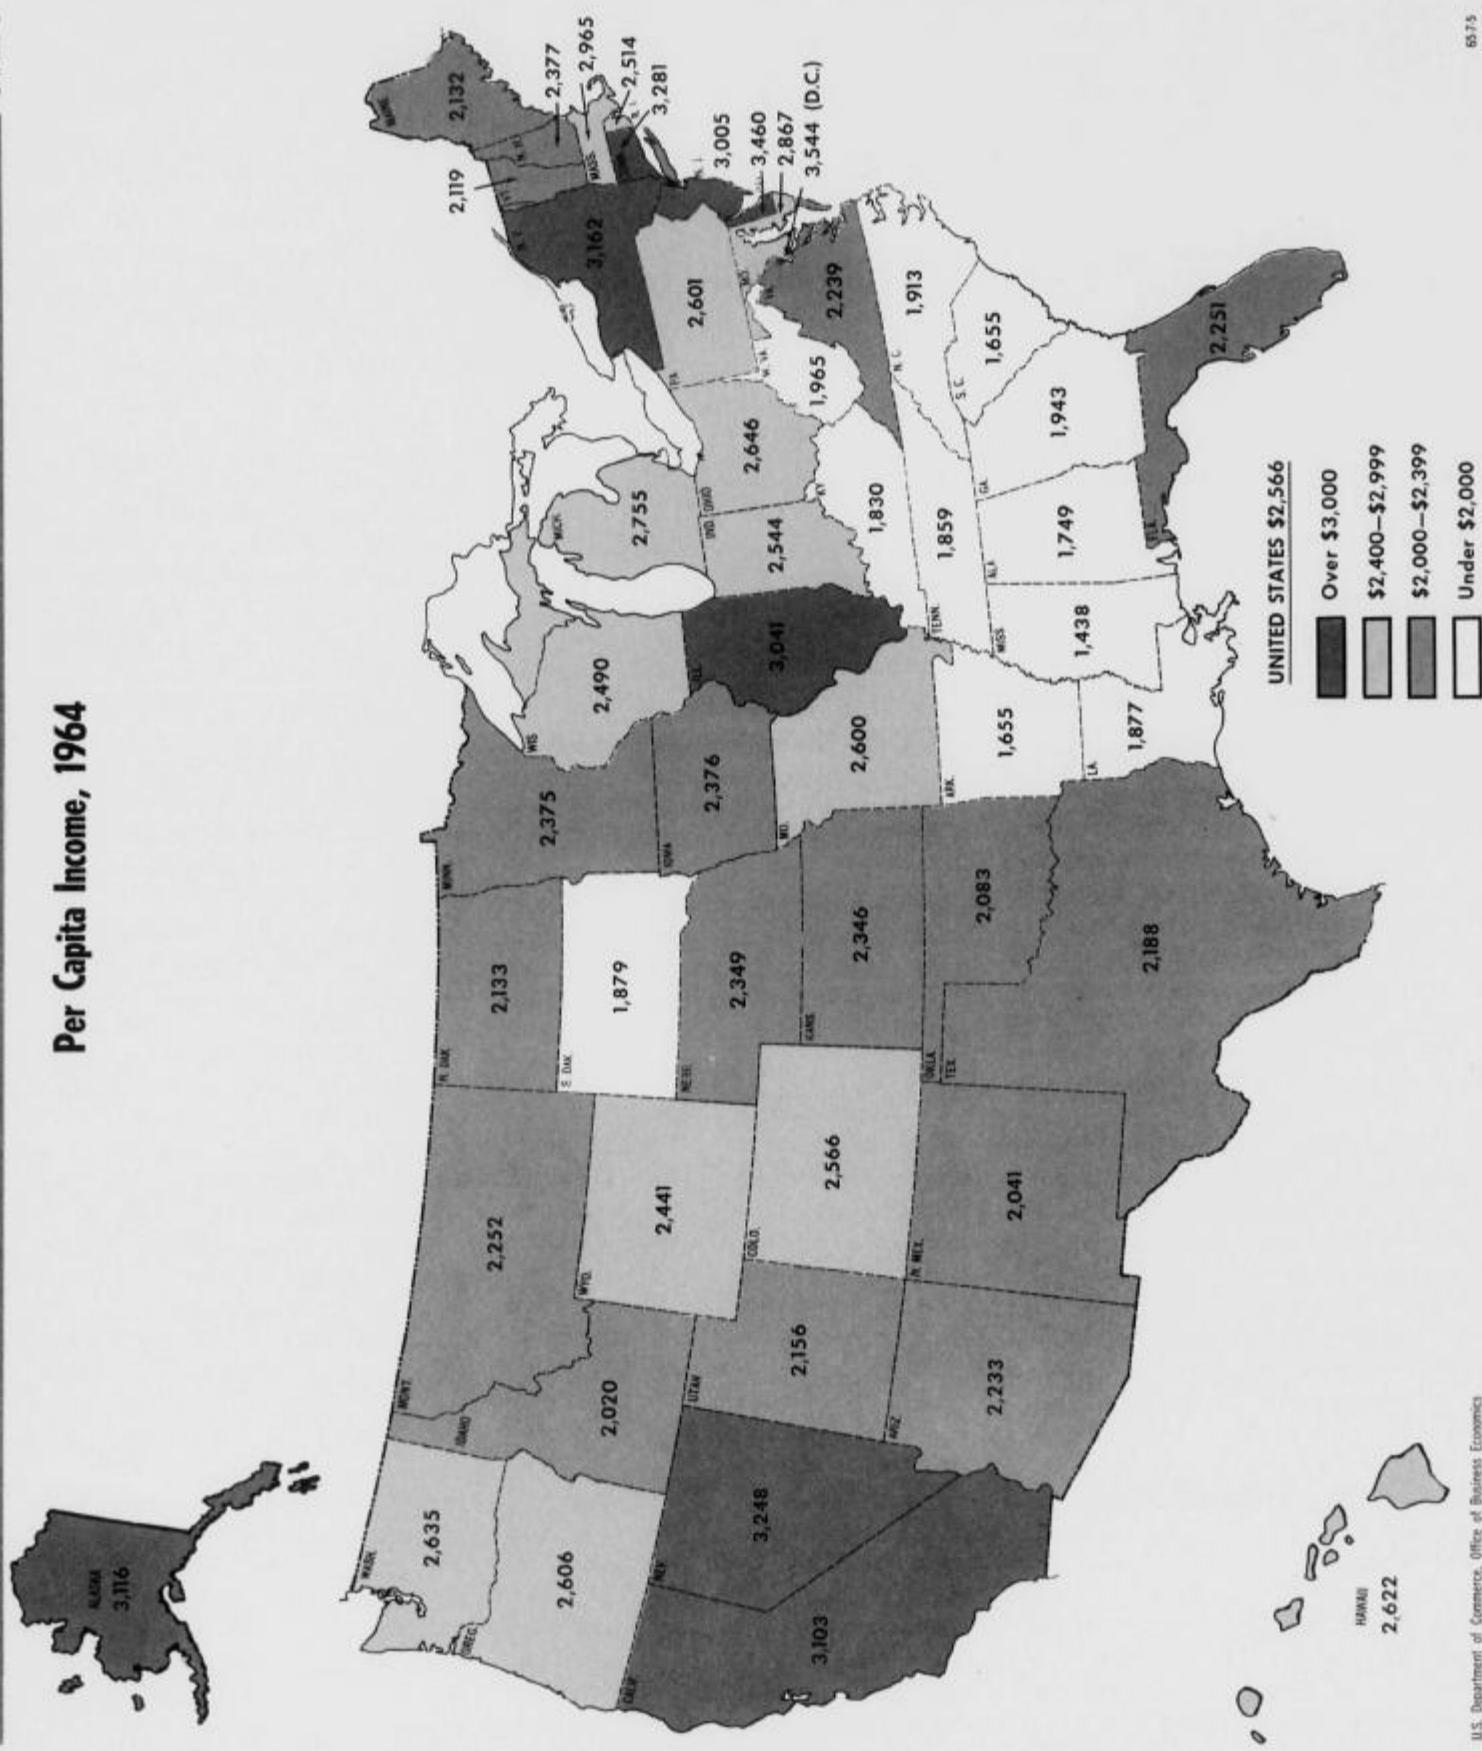

Scope of this report

This report, which measures State

SURVEY OF CURRENT BUSINESS

July 1965

CHART 5

Per Capita Income, 1964

changes in the flow of personal income, continues the annual series, initiated in 1938, on State income payments to individuals. Preliminary estimates of personal income in 1964 were presented in the April 1965 issue of the SURVEY. That issue also contained a new State series: disposable personal income measured in both current and constant dollars.

Although the disposable income measure serves a number of purposes, it should be noted that trends in total and per capita disposable and real disposable income are practically identical with those in total and per capita current dollar personal income.

The 1964 income estimates in the April SURVEY were based on prelimi-

nary and incomplete information. In particular, wage and salary data from State unemployment insurance (UI) programs, which provide the major statistical underpinning for the State series, were available for only three quarters of 1964. The figures in this report reflect UI data reported for the full year.

Table 1 shows total personal income by States from 1954 through 1964. Table 2 presents annual estimates of per capita income from 1950 forward. Comparable figures for earlier years back to 1929 may be found in "Personal Income by State Since 1929," a 1956 supplement to the SURVEY, which is available in libraries and which may

still be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, or from the nearest U.S. Department of Commerce Field Office at \$1.50 per copy.

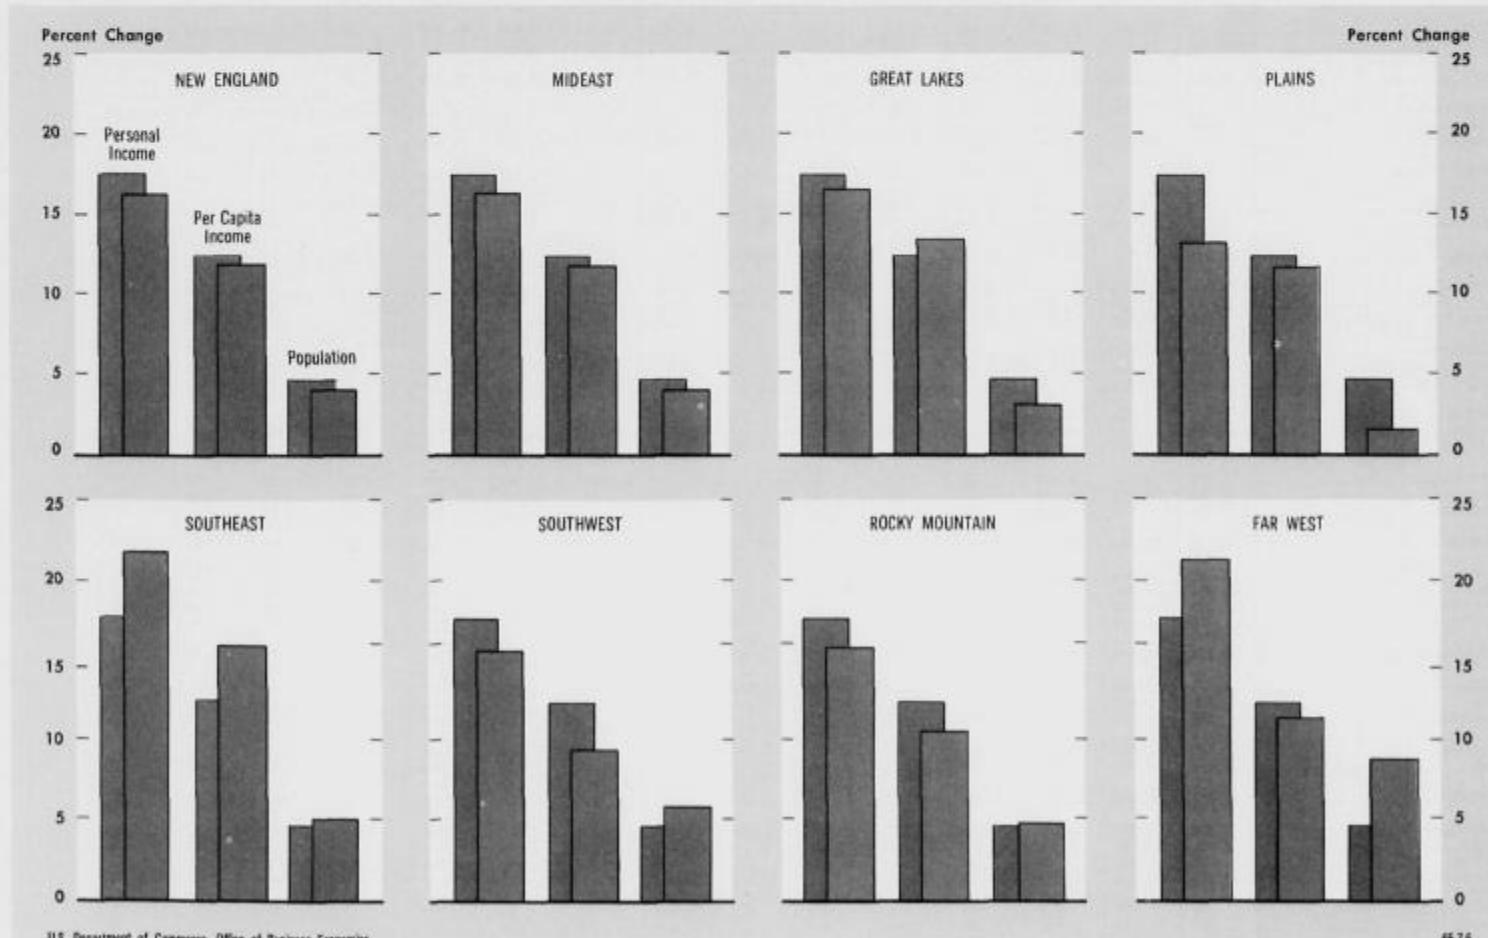

Tables 4 through 62a present a breakdown of personal income in each State and region by major source for the period 1962-64. This detail includes wage and salary disbursements classified into about 25 separate industries, proprietors' income subdivided into farm and nonfarm components, and totals for each of the other main types of personal income. Comparable data for 1929-53 are contained in the Personal Income supplement noted above.

CHART 6

Percent Changes in Personal Income, Per Capita Income, and Population, by Regions—1961-64

Relative changes in total income and population since 1961 show a continuation of postwar trends, with the Southeast and Far West advancing faster than Northeastern regions

United States Regions

SURVEY OF CURRENT BUSINESS

July 1965

Figures for 1954-56 may be found in the August 1959 issue of the SURVEY; for 1957 in the August 1960 SURVEY; and so on through the August 1964 issue, which contains estimates for 1961.

Because of the numerous requests for breakdowns of State personal income by industrial source, this report includes estimates of the industrial sources of income in each State in 1957 and 1961.

These are shown in tables 63 and 70, along with figures for 1964. Comparable information for 1929, 1933, 1940, 1946, 1948, and 1950 may be found in the Personal Income supplement.

1. Total includes Alaska and Hawaii 1960-64 but not in earlier years.

As noted on page 1 of this issue, the August SURVEY will contain the results of a major revision of the national income and product accounts. Because of timing, the revisions have not been incorporated into the State estimates;

this will be done later this year. A similar situation applies also to the State estimates of farm income that are furnished each year by the U.S. Department of Agriculture. The 1964 estimates contained in this report re-

present a continuation of the unrevised series. Accordingly, they differ somewhat from the figures that will appear in the supplement to the July issue of the "Farm Income Situation" of the U.S. Department of Agriculture.

Footnotes to table 63:

1. Consists of net income of farm proprietors, farm wages, and farm "other" labor income, less personal contributions under the OASDHI program.

2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employee contributions for Social Insurance), other labor income, interest and transfer payments.

3. Equals total personal income less farm income and government income disbursements.

NOTE.—U.S. totals include Alaska and Hawaii.

Footnotes to table 70:

1. Consists of wage and salary disbursements, other labor income, and proprietors' income.

2. Does not include earnings of military personnel.

3. Less than \$100,000.

NOTE.—U.S. totals include Alaska and Hawaii.

Footnotes to Table 66:

1. Consists of net income of farm proprietors, farm wages, and farm "other" labor income, less personal contributions under the OASD program.

2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employee contributions for social insurance), other labor income, interest and transfer payments.

3. Equals total personal income less farm income and government income disbursements.

Footnotes to Table 70:

1. Consists of wage and salary disbursements, other labor income and proprietors' income.

2. Does not include earnings of military personnel.

3. Less than \$500,000.
